

## Homework for the Week of April 1st, 2019

1. Read nightly.
2. Visit Zorbits and Raz Kids
3. Complete the Math and literacy activities

### Going Batty

Bats, bats, everywhere.  
They hang from here; they hang from there.

Bats find the perfect place to roost,  
in trees and under bark.  
They hang from branches upside down  
and see best in the dark.

When the sun is setting,  
bats ready to take flight.  
finding food is their big job,  
these creatures of the night.

Some bats are just fruit eaters,  
while others just eat meat.  
Vampire bats drink mammal blood;  
some catch fish with their feet.

Brown bats do eat mosquitoes -  
'round 600 an hour.  
They spread seeds for new plants and trees;  
they're small with mighty power.

Bats help rebuild cut forests  
and save many crops from harm.  
Wouldn't you like to have  
a few bats upon your farm?

In some ways they're like kittens-  
they lick their fur so clean.  
Bats fly by using hands and wings,  
yet rarely are they seen.

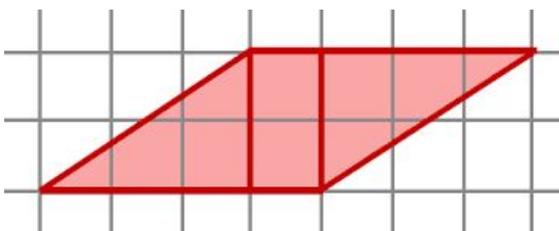

Most bats have a special gift-  
using echoes to locate.  
with two keen ears to steer the way,  
just watch them navigate!

As mammals go, the bat's unique.  
Please, let me tell you why:  
The bat's the only mammal  
that can really fly!

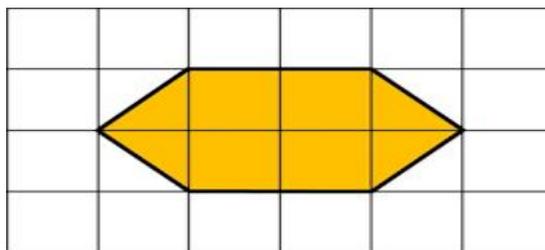

After reading the poem respond to these questions in the Language folder of your Google Drive or on the back of this page. (Remember to answer in full sentences)

- 1) Is "Going Batty" a good title for this poem? Use details from the text and your own ideas to support your answer.
- 2) After reading this poem what are your feelings about bats? Use details from the text and your own ideas to support your answer.

### Math:

A

B

Which shape has the greatest area? Justify your thinking on the back of this page.
